

Morph LLC

Software and managed technology for the banks, health systems and public agencies whose systems must not fail. Morph builds its own applications for regulated work, and resells, implements and runs the platforms around them, so one partner is accountable for the whole stack.

CORE CAPABILITIES

- **Morph software:** subscription applications for regulated workflows in financial services, healthcare and government, such as anti-money-laundering case work, credentialing, FOIA redaction, permitting and vendor risk.
- **Managed platforms:** resale, implementation and ongoing administration of the platforms around our software, including government and regulated editions of productivity, identity, service-management and data platforms.
- **Implementation and migration:** discovery, design, configuration, integration, data migration, testing and go-live, run as a defined project.
- **Round-the-clock operations:** network and security operations and technical assistance, delivered follow-the-sun by our Global Resilience Operations unit.
- **Data and AI governance:** data engineering, privacy engineering, data sovereignty and AI governance from our Data Trust & Governance Labs.
- **Compliance engineering:** controls mapped to the frameworks clients answer to (for example NIST SP 800-53, FedRAMP, CJIS, HIPAA and FFIEC guidance) with the documentation that supports an authorization or exam. The decision stays with the client and its assessor.

WHAT SETS US APART

- **One accountable partner** for the application, the platforms around it and their day-to-day operation.
- **Compliance by design:** controls built into the infrastructure, so audit evidence is produced as work happens.
- **Independently audited:** SOC 2 Type II and ISO/IEC 27001, with reports available under confidentiality terms through our Trust Center.
- **Sovereign hosting** in the United States, the United Kingdom and Australia.
- **Follow-the-sun teams** in eleven offices across ten countries.

SECTORS SERVED

Financial services: banks, credit unions, broker-dealers, wealth managers, specialty lenders. Healthcare: health systems, ambulatory and specialty networks, life sciences. Government: federal civilian, defense and intelligence, state and local.
